

IN THE CLAIMS

1. (currently amended) A combination tool assembly for working on a material, the assembly comprising:

a hand tool portion having a working end for engaging the material, said hand tool portion being a caulking gun;

a forced air portion having a blower and an outlet, said blower and said outlet in communication with each other, wherein said outlet is positioned on said hand tool portion and aimed toward said working end so that upon actuation said forced air outlet projects an air stream toward the material.

2. (canceled)

3. (original) The combination tool assembly according to claim 1, wherein said hand tool portion is manually actuatable.

4. (original) The combination tool assembly according to claim 1, wherein said outlet is oriented at such a position to direct the air stream in front of an engagement point between the material and said hand tool portion.

5. (original) The combination tool assembly according to claim 1, wherein said hand tool portion and said forced air portion are integral.

6. (canceled)

7. (canceled)

8. (canceled)

9. (canceled)

10. (canceled)

11. (canceled)

12. (original) A combination tool assembly according to claim 1 comprising:

a fastener, said fastener including a first curved wall defining an aperture adapted for receiving said forced air portion and an extending portion coupled to said first curved wall, wherein said hand tool portion includes a surface mounting portion adapted for engaging said extending portion.
